## New kajabi templates

4.8/5Outstanding One day, two software enthusiasts meet in a church. A few years later, they build a million-dollar company that helps thousands of people escape the jobs they hate and realize their dreams. Whereby was thus born. The website template whereby vision was simple. Cobby co-founders Kenny Rotter and Travis Erser understood that people had the knowledge and stories to share and wanted to create a single platform that would help their customers do so. If you are a content creator, you may have heard about Kabi. It is one of the most popular platforms for selling online courses and the best in relation to integration. With so many options out there that are relatively cheaper, what makes builders choose Whereby? Is it really worth the money? In this guide, we review the outstanding features of Whereby to provide and give you an inside look at how the system works for you and your business. Overview Kajabi's general web template pros is a highly integrated platform that features many super customer-friendly care tools that allow creators to easily market their products more accessible customizable themes using Wistia as big video host email marketing tool Cons Kajabi pricing relatively more expensive than other programs no feature to create certificates of evaluation of limited customization users need coding skills to edit whereby photo site? If you wish to market online classes, Whereby is a wonderful place to do your business in. Kajabi is an online class platform that enables users to strengthen their jobs using only 1 site. It's all - from creating classes, marketing, and selling them separately or through a membership system. How Whereby Work Whereby gives you the platform to create and sell online courses and market them so that you can profit from the activity. The first thing you need to do is buy a plan from them. You have three choices for this, which will be discussed later in this review. From there, you can easily set up your account and upload your videos. It goes without saying that you have to record your video presentations first. If you need tips for this, check out this awesome. Next, you have to go to the lesson editor to upload videos and give titles and descriptions. If you'd like to add quizzes, you can also do so simply by encoding questions and offering options (if it's a few choices). Then Whereby also allows you to build the pipeline. This is a mechanism that allows you to turn the vision into customers by providing more effective marketing funnels. With pipelines, you can promote your products by providing freebies that require Outlook input of your email address. As soon as you have these addresses, you can get in touch with your leads through Kajabi's actions, which may also be customized. When a customer decides to buy in, you can process payments through the site. You can do all of this without having to leave Kabi. However, there is A number of features that are not found in where they are discussed in the next sections of the review. But overall, Kajabi is a powerful platform that you can use to kickstart your online eLearning company. For a quick discussion about how Whereby can grow your business, check out the video: Why should you consider Cobby? Whereby is the most integrated online course platform today. This means that you don't have to use many third-party websites to run your entire business. For this reason, you can sell online classes without paying extra for many tools. It is interesting to note that some businesses are now going 100% online with period sales. Although some drills migrate to Whereby because of its relatively higher pricing, it will offer long-term benefits than it requires no commercial costs and you have fewer parties to cover because of the many basic tools available in the Whereby schemes. It's also a very user-friendly platform and customization is very simple. It is possible to have an online business at no time with Whereby even without learning how to code. Cambi as a tool for non-tech savvy some men and women who are great at teaching may not be technologically inclined enough to share their knowledge and information online. But the founders of Whereby have taken this into view and aim to fix the problem with easy website access and understandable even for those with issues with computer work. Almost All-in-One, as mentioned earlier, Kabi integrates most basic tools into its system so that content creators can do all their work on a single platform. Among the hardest things to understand if you are not that tech-savvy is how to work with other sites and integrate them all into your business. this is whereby comes to be saved . Save for a few minor features that developers are working on, you can almost run your online business using just Kajabi. This site allows you to create content, market your products, offer coupons for discounts, track in leads, and handle payments. Kajabi Training provides a wide range of video tutorials created especially for novices. They call this The University of Champions, and it provides users tips on the best way to go about with different steps in creating and growing their business. Kajabi has tutorials on topics such as creating online courses, marketing your goods, and processing payments. These guides are available in both video and text formats. All you have to do is go to the assistant bar at the top and kind of off any issue you're having, and it will show you the relevant tutorial. Customers support the format of the Whereby website if you are having problems with solutions that are not found in the online guides, the next step is to contact customer service. The Whereby customer service team is one of the best. So if you are stuck in an issue, you can always rely on them to provide you with you need. If you opt to choose the most expensive layout, you will have access to a boarding room support team that provides you with live chat. However, please note that if you receive only the Whereby base layout, your team will not always be available to you. You only see them on weekdays from .m 9 p.m. to 7 p..m.. The basic layout of customer support functions on a ticket system, however you will find a response within the day. This is one of the reasons why more expensive programs are worth the extra money if you are not confident about your computer skills. Two other Ubi schemes offer 24/7 access to support while the basic does not. How to use Whereby: Basics of creating a course to create a course in Whereby, all you need to do is click on the new product button located at the top right. From there, you can choose from the four distinct types of products you would like to create. This product plan is called: mini-course is a smaller period that is easy to finish and is often used to build brand value. The online course of these courses is all blown yourself which is much longer. Evergreen training option allows you to drop feed content to increase discipline and interaction among your participants. Empty if you want to fully customize your product, you have this choice. The next thing to do will be to click on the online production of the product button course. Then Kabi prompted you to type a name for the course. Once you're done, you'll see a page with a preset outline. Uploading and editing this section is fairly right. You can easily drag around concept tabs to change your make-up. This is how your course will be arranged. The page contains several headings that are called categories. They are set in a gray background. They only serve as organizational tools. Critical issues are included in the articles, which you can see in the white background. This is what you click on to go to the lesson editor. Uploading the content of the movie format of the Whereby website when you built your initial skeleton course online, it's time to upload your pre-made videos. This is not hard at all in Whereby. You can see an icon immediately that makes it possible for you to upload either a video or evaluation. A very good feature of Kabi is the ability to upload multiple videos simultaneously, and the website will automatically convert them into ones that you can edit later on. This saves your time in clicking on tabs one by one and uploading video files separately. One of the most intriguing features of Whereby is its use of Vestia for its video host. If you analyze this in terms of cost, using Wistia alone justifies your purchase of a whereby scheme. It costs you \$99 a month with Wisthea at \$20 more, you get an annual payment for the basic whereby package with all its features. Evaluation is a very important assessment in keeping students involved and They make the most of the lessons, and whereby he understands that. It's also an important tool if you opt for content locks, which are discussed later in this review. There's also a whereby feature that automatically sends extra material to participants who fail exams to help them understand classes. After every lesson that is introduced, Whereby makes it effortless to create exams. You just need to type questions and choices into the lesson editor, which is simple. However, we have to admit that Whereby is a little limited when it comes to the evaluation area for a few reasons. First, it's not very flexible with the content you can add to a lesson. You're allowed to have a video and an assessment under a bunch of lessons, secondly, whereby doesn't support advanced exam editing. It does not allow users to have query banks or randomize questions. But, Whereby does support unique styles of quizzes such as multiple selections and paragraph-style questions. It can also immediately give results after each assessment. In addition, Kabi supports a assignment submission feature that enables students to upload files to you to check in the future. Whereby photos also allow you to upload a poster photo for each lesson, which may be useful for keeping your students interested. Instead of seeing simple texts of the lesson name in the list, they will have a visual representation of those lessons. This can easily be done by clicking the Pick File button on the right side of the editor. The Certificates of The 1st Format Website is a whereby area that requires improvements in certification. While the website allows creators to give a certificate of completion, for now, it is a feature that does not make it possible for the administrator to take native certificates. This is one of the reasons why Whereby is just one platform almost all in one. To perform a certificate of completion, you can use services from third parties such as Canva, Google Slides or SmartDraw. Whereby also does not represent the quantity of time spent learning the course or any continuing education credentials. This is a great deal for people who would like to opt for eLearning to earn credit. We think Kabi should come up with a solution to this. Downloads if you want to add a document that you believe may be useful to your students, you can do so on the same lesson editor page. This can be found in the Downloads section on the right side of the page. Every file you upload will be downloadable by your students while they are specific in that lesson. The body in this section, Whereby lets you add a description of the lesson or text of the video. Transcripts can help students when they like to review but don't have to watch videos again. If you opt out only for explanations, then it allows students to understand what lessons will be and what topics you discuss in that particular Student interactions whereby community website templates understand that it is important to have a place where members and students can talk about the topics presented in the course materials. In this way, they can access valuable information not only from the app creator but also from their fellow students. For years, course builders have used a separate platform for the job, such as Facebook. This required members to join Facebook groups to interact with each other. However, with Whereby, members don't need to go elsewhere to ask questions and discuss lessons as it integrates the system in a feature known as society. These associations are so valuable that Whereby even allows customers to pay for access to the community on their own. The community allows the creator to efficiently address the student inquiry while offering the same opportunity to other members. This is great news for builders in terms of profits as well. Because society may be an independent product, those people who are hessy to buy the entire course can only choose to access payment negotiations. The organization is the subject of a common problem with forums (as evidence from many Facebook groups) is that it is quite difficult to follow specific topics due to the lack of organization. This makes it hard to really listen to your audience and understand them, which is a common mistake for online course businesses. Whereby solves this problem by allowing the web page manager to organize and reorganize feeds. The manager can categorize by subject, and it also has a PIN feature that enables him to move it to the peak of the feed. In general, the Community feature is an advantage offered by Ubi, which is not found in most of its competitors. This is a welcome addition to any online course business it enables to create a forum on a native possible possible possible while creating a forum. This is among the reasons why Whereby is your biggest one-stop shop for its online business today. Access to content, depending on your preference, Whereby offers options on how you can access class materials by your students. You can either allow your students access all lessons at a time, drop feeding them over a period of time, or lock them down. This last option tends to increase engagement since there is a need to finish the lesson first before continuing to be the next one. Dripping course content as the name suggests, this option enables the administrator to publish the content gradually rather than shed it all at once. Whereby has the ability to allow the creator to perform existing categories within a period of time after a certain few days after enrolling a student. It's really nothing more than timing time when a particular course material shows up on the student's page. There are many advantages to this system. This is a great way to keep the student interested in returning to the page review and checking whether a new material has been posted. It prevents students from jumping too far ahead and bypassing lessons is probably important. Third, this feature is useful when you decide on a subscription of the membership type because it prevents students from downloading and seeing all the material at once. This is equal to more months under membership, as one of the greater profits. Locking the content of this feature may be useful so that students don't get overwhelmed with all the lessons. It's a good way to set up their heads to take every lesson. If you choose to open another lesson by allowing the student to pass the assessment first, this can significantly increase their interaction and make sure they understand all the important concepts first before moving on. Analysis of the Whereby Period website template this features is useful in improving the content of your course in the future. What it does is create heatmaps and hit the video. This way, you will know at what point your students were dissuaded by content. So, it shows you information where your viewer interest has peaked or dropped. In particular, Whereby produces the following course analysis: The game rate gives this data on how many people actually view a particular video. Some students may prefer to read transcripts and download PDFs instead of actually watching videos. Kajabi's average engagement website is the template information generated here is the normal percentage of the total video that viewers actually watch. Some students choose to watch only the first part of their video and leap into the next lesson. It will give you an idea of how well you can keep your audience interested in what you need to say. Visual nomination viewer this feature creates a graphical recap in your actual video. This shows you a graphic representation of your students' engagement at certain points in this video. Usually people tend to stop watching outside at the start, so this gives you a general downward tendency. Heatmaps viewer just because your video is playing doesn't mean the viewer is actually watching it. Your student can keep video content in the background when checking social media sites. With Heatmap Viewer, you were able to see that the pieces were not viewed by individual students and that was watched. This may give you an idea of which part of the lesson is significant or where your students are in trouble processing thereby necessitating them to return to that part. Overall, Ubi has a very useful variety of course analysis tools that you can use to create better videos in the future. Blogging 1 is a way to keep people interested in your products is to give them a blog where they can read about you and the topic you wish to introduce to them. This can effectively lead to production that will turn curious visitors into paying customers. Fortunately, Whereby offers this feature to its users. Unfortunately, we have to point out whereby needs to be Improvements in this area. A Picture Problem We mentioned earlier that you do not have to understand how to code in order to run your business with Kajabi. However, you may want to start researching basic coding if you wish to personalize photos on your blog with the power of Whereby. When you upload a photo at the top of a blog, for example, the image will appear in the recommended image size, and unless you learn how to work with HTML, you will have no other way to resize this photo unless, of course, you hire someone to do it for you. Wrapping text is also the cause of headaches because just like the image above the article, you can't edit how the text wraps around a picture in your site's body without going to HTML and editing it accordingly. There is also the issue of not having an image bank when you choose to upload a photo. Suppose you want to add an image on your blog that you already have on one of your other. You are able to get those photos in the upload option, so once you want that added to each other, you need to drive it on your computer or on Google or you have to download the photo again. This accepted activity can become very frustrating, and it is a kabi area to work on. Tags are another thing that makes blogging in Whereby without any effort is your inability to let you choose from the tags available on your own. You know how convenient it is to opt for a tag in a WordPress so that readers can easily refer to related articles from the same tag exactly? that task with whereby is much harder. When you need to add labels to a specific one in Kajabi, you should actually remember the label you need to add it below. Whereby does not provide you with the list of previous tags you used. So you need to rely on your memory or a separate list for this one. So overall Kabi's blogging game is not strong. It needs to improve on your blogging features since it can really be a pain to keep tags and edit html every time you need to create a blog. A marketing tool by Whereby Ubi offers many marketing features that help you promote your products. In setting the price alone,

you will be sold the option. It helps quickly show your customers another product offer after completing the purchase. Other methods will be discussed in the future. When you click on the marketing tab on the left side of the site, you can see a sub-leigh called Pipelines. This is a tool that Whereby uses to simplify marketing and sales. It's essentially automation to sell your products. The name is inspired by the shape of the actual pipelines. They are designed in a manner that has the exact same diameter at both ends. This relates to The Whereby Goal to convert the same number leading to the same number of paid customers. This is actually an improvement on the celebrity sales funnel where a large number of leads lead to significantly smaller leads from buyers. Kajabi offers a few options for your pipelines: a free promotional report offering a sale of the Webinar product launch product Virtual Summit blank creates a pipeline when you click on a product pipeline, it is going to show you a picture of the steps that follow the specific pipeline. In addition, it includes a video and a text that will explain how best to use that pipeline. Editing the contents of the pipeline is a breeze. It's very upst to the bottom, and you can immediately see what it will look like to opt out on your page from a customer's point of view. In addition, it allows you to edit emails that are sent to your leads, and you can do so easily on the same page. You will be given a template that you can choose from. This template is special because it was made by Brandon Burchard, among the world's leading high-performance coaches. And since Whereby wants his users not to ignore any important steps, additionally, it provides a small checklist on the left side of this panel so that you can check which activities are left to edit. The Whereby Pipeline Analysis has a feature-hit pipeline that allows you to monitor how well your marketing plans are doing. Here you will have the ability to specify how each page and pipeline email is going. It even provides you with data about your earnings per view. This analysis will be useful later on when you review your marketing strategies and carefully point out which areas to improve to produce more buyers. Pipelines are among the strongest parts of The Anywhereby. This is very effective in creating leads and in pursuit of this leads to the conversion of advertising into revenue. Email marketing automation when a visitor put something in their cart and then abandons it without completing the purchase, you can set Kajabi to send an email to that potential customer. It acts as a reminder of your transaction and may at times convince that person to eventually buy the product. Thanks to automation, this is done with no manual work in tracking your visitor activities. Kajabi's marketing partners have partnered with some of the biggest tools for email marketing. In particular, it has integrated the following into its system: ConvertKit, MailChimp, Drip, Aweber, and Active Campaign. The affiliate program of The Anywhereby Website Templates we need to point out is that this choice is only available in the growth and professional programs of Whereby. It is not found in the basic plan, which is the cheapest option. Whereby understands the founder's need to promote his products through affiliate marketing. Therefore, it has a vital tool for managing affiliate programs. This will make it easier for you and your partners to promote their goods and give them an agreed commission. Pricing courses you are whereby offers a very simple method of pricing your goods. Just go to the Suggestions tab on the left and click on Add New Offer. You have the option to bundle your products and price them accordingly. This is it Comfortable especially if you are trying to promote the course. Instead of selling them individually, you have the choice to present them as a collection. In addition, you can choose whether the payment will be a one-time or subscription-based basis. When you make a new deal, it will ask you to choose a title for this offer, the product that you include, and the price. Note that at this point, you can only choose 1 product, but don't worry because on the next pages, you will have a lot of options in terms of bundle and payment choice. From there, it's supposed to redirect you to a page that allows you to select a built-in name and add descriptions. When you click on the edit price it will pop-up which allows you to choose the following payment choice: pay free once multiple payments are here, you can choose the amount of payment that must be between 2 and 12. A recurring subscription with this choice, you can offer your customers the option to try out their merchandise for a certain number of days. It also provides you with the choice of how many times you bill your customer. It also allows you to choose the currency you want the price to be in. On this page exactly the same, you will have the option to add more products to the offering. this is where the bundle is made . For some tips on pricing strategies, this is very helpful. Kabi partners' payment methods with stripes and PayPal for payment processing. As previously stated, Whereby does not charge the transaction fee. However, you need to respond to the price of your payment method partners. PayPal in particular makes it easier for you to pay your affiliates if you have an affiliate program. All you have to do is export a list of all your affiliate sales and use that file to do PayPal payment. In the case of a refund, you don't have to leave Whereby to process them. The site has a system that allows you to process refunds without going PayPal or stripes. The Whereby Pricing Template website is not one of the strongest points of Kabi. In fact, many people twice thought about using the system because it is relatively more expensive than most of their counterparts. However, with a very integrated platform, you will not have to pay extra for additional services from third parties. That way, in general, we think Kabi is worth the money. Below, we discuss the three-tier kabi pricing and the benefits you can get from each one. For a more detailed discussion, we have dedicated a full article on the plans here. The Basic Plan Whereby Web Template is the lowest price the Ubi scheme starts at \$119 if you opt to bill the year. If you opt for monthly bills, however, it will likely cost you \$149 per month. The basic plan may be the cheapest option and it's definitely a good place to start, but we don't recommend it if you're really serious about growing your business. This plan limits you to only three products and one website, and you can only have 1,000 members . However, landing pages and marketing emails are unlimited. You will also have to schedule your questions about the website with a basic plan because The Anywhereby Customer Service will only be able to help you on weekdays, from 9.m to 7 p.m..m. via live chat. In addition, it contains some of the most important marketing tools that you can find in higher pricing rows. So if you already have an experience with creating courses, you may want to take into account growth plans or pro. Kajabi web template growth plan as the name suggests, this pricing row allows you to grow your company with Kajabi significantly. For \$50 more, you can level up to this next row and get five times more courses. The monthly payment option will cost you \$199, but if you choose to make an annual bill, it will only cost \$159. The additional features of the Whereby Website Template are the best reason to consider this row over the basic layout are three major features that are not found in cheaper choices: white labeling, affiliate marketing, and automation. By tagging white to the website, you can erase all the works from your front website. All your customers are going to see a website that screams only at you. It's useful when it comes to promoting and branding. Affiliate advertising, on the other hand, comes handy when you decide to seek support from other influences to promote your products. This step allows your audience to grow and enables you to reach more people who can be potential customers. When you're serious about growing your business, you need the support of your fellow creators so that you can tap in your audience as well. This is one of the easiest ways to develop the following because you are reaching out to people who are already interested in the products you are trying to sell. Finally automation allows you to easily keep track with your students and keep them engaged. With this feature, you don't have to constantly monitor which among them requires a little more drive to get the maximum out of your courses. Kajabi allows you to automatically send emails to students who have visited your site or provide additional learning materials to those who do not perform well in examinations. The website template of Whereby as a creator, we are aware that you are not in business just money. You want your merchandise to be worth businesswise, too, this is worthwhile because if people are getting value for what they pay for, they will be more willing to return for more. It's a win-win. Customer service unlike the basic plan, you can achieve whereby support services are provided with any concerns at any time of the day with the growth plan. You can get in touch with your support team whenever you want, so if you want to drag all night to work on the following course, you can get a certain help just one email away. The professional plan of the website template is where to go It starts to be really spicy. This includes everything that is the growth plan but it allows you to have 100 products for sale. It also allows the user to manage three websites and at least 20,000 members. There are still an infinite number of landing pages, but promotional emails are limited to 2 million people. We'd wish it would also be unlimited just like the lower ranks than you paid \$200 over the growth plan. You may get Kajabi's professional plan for \$399 per month for the monthly payment option and \$319 if you wish to have an annual bill. Aside from increasing the amount of products, sites, and members, you also have access to the Academy of Experts, where you can get more information about your personal brand marketing. It still has 24/7 customer support services that allow live chat with agents. The pro-whereby scheme is for those who have an extraordinary amount of course to market. And with 25 admin users allowed under the app, you can outsource some of your work to employees. If you are able to do so, congratulations are on order. You have managed your business well. Migrating to The Whereby Website Templates If you are not someone who is new to the business creation period, you may have used other platforms before. Whether this survey of Whereby and others like it has convinced you whereby is a better option, the next thing you have to worry about is the way to migrate all your information. You don't want to start from scratch, and you definitely don't want to upset your current members. Luckily Whereby lets you migrate your members simply by entering your name and email address using .csv file. However, you are limited to 500 members per import, so if it has more than that, you will have to deal with multiple imports. The biggest drawback with migrating to the candies of another platform is the fact that their existing members need to reset their passwords because those are not included in the import. This is a good sign, though because it means that passwords are well protected from platforms can't access them. However, this additional work may not be welcomed by its customers. The Whereby website template concludes the Whereby website template offers a lot of value for the price you pay. It has a well-integrated system that allows even beginners to easily grow their eLearning business. There are not many technical skills necessary to run an online business with Kabi. This enables creators to focus more on creating valuable content for their customers instead of wasting energy on building a professional-looking website. You have absolute freedom over your student data and pricing your courses unlike other similar platforms. Whereby also has a lot of marketing features that will push your company to new heights. With all the tools provided by the website, we are confident kabi can recommend to those who wish to create a career of making online It is generally a fantastic tool to manage your online business from imagination to sales. Click here to see more about pricing for Kabi. whereby .
